¹ Diamonds are assigned based on a home health agency's rate compared to the national reference score.

² For 'Patients who have less pain when moving around', the reported score is the observed score (i.e., NOT risk-adjusted).

³ For 'Patients who had to be admitted to the hospital' and 'Patients who need urgent, unplanned medical care', lower percentages are more desirable.

♦♦♦ Agency's percentage is statistically above the national reference score (except for 'Acute Care Hospitalization' and 'Any Emergence Care Provided', where three diamonds means the agency's percentage is statistically below the national reference score)

♦♦ Agency's percentage is statistically the same as the national reference score

♦ Agency's percentage is statistically below the national reference score (except for 'Acute Care Hospitalization' and 'Any Emergence Care Provided', where one diamond means the agency's percentage is statistically above the national reference score)

N/A Too few cases to report on

X No data yet available from this agency (Agency must be collecting quality data for one year before the agency can be reported on.)
